## GETTING STARTED WITH THE CLINICAL SUITE

You can reach the Clinical Suite URL directly by entering this URL into a browser:  
<https://secure.previser.com/clinical>

or from [www.previser.com](http://www.previser.com): Click the **Clinicians** tab,

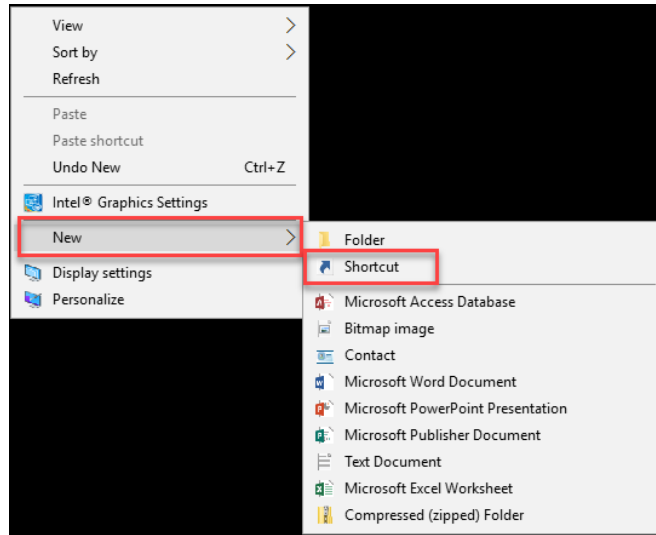

then click **Access PreViser Clinical Suite Here**.

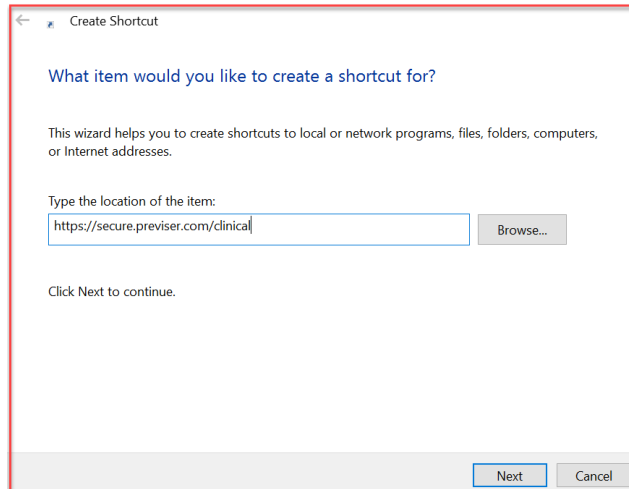

## TO CREATE A SHORTCUT ON YOUR DESKTOP

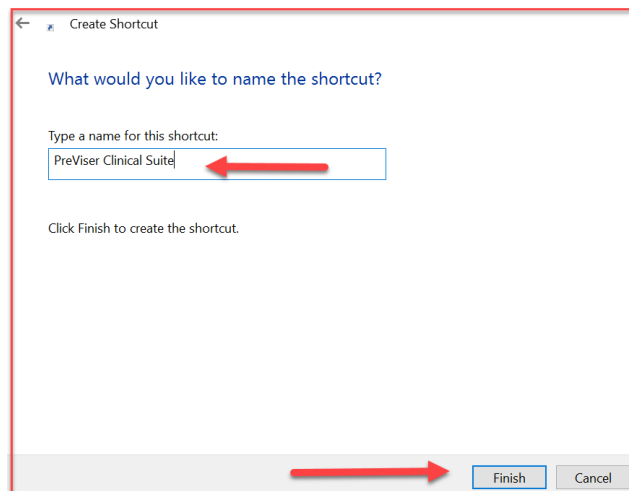

1. Right-click anywhere on your desktop.
2. Select **New** and then **Shortcut**.

3. Enter <https://secure.previser.com/clinical> into the Shortcut address box.
4. Click **Next**

5. Enter the name of the Shortcut (PreViser Clinical Suite) into the box.
6. Click **Finish**.

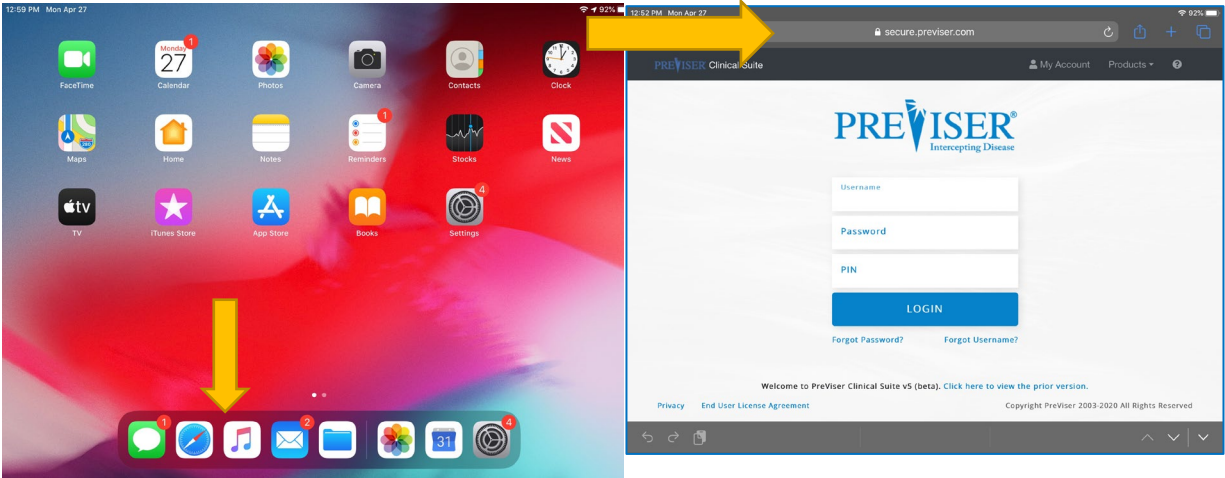

You will now have a shortcut displayed on your desktop labeled **PreViser Clinical Suite**.

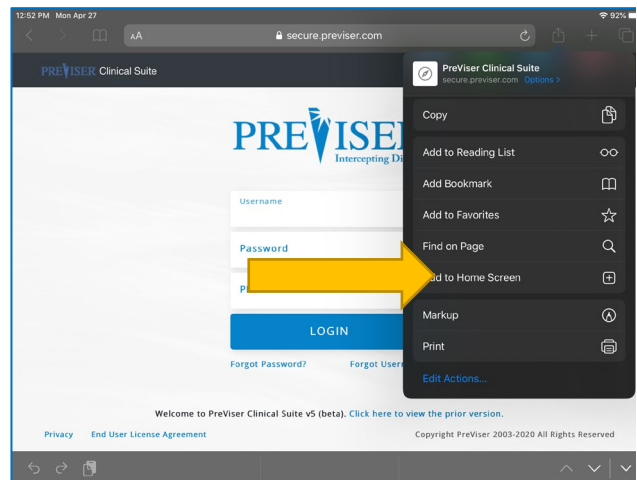

## TO CREATE A SHORTCUT ON YOUR IPAD

1. Open Safari on your home screen and enter <https://secure.previser.com/clinical> in the navigation bar:

2. Tap the Share Icon and tap **Add to Home Screen**.
3. Enter the name PreViser Clinical Suite and tap **Add**.

4. You can now easily access PreViser Clinical Suite on your Home Screen!

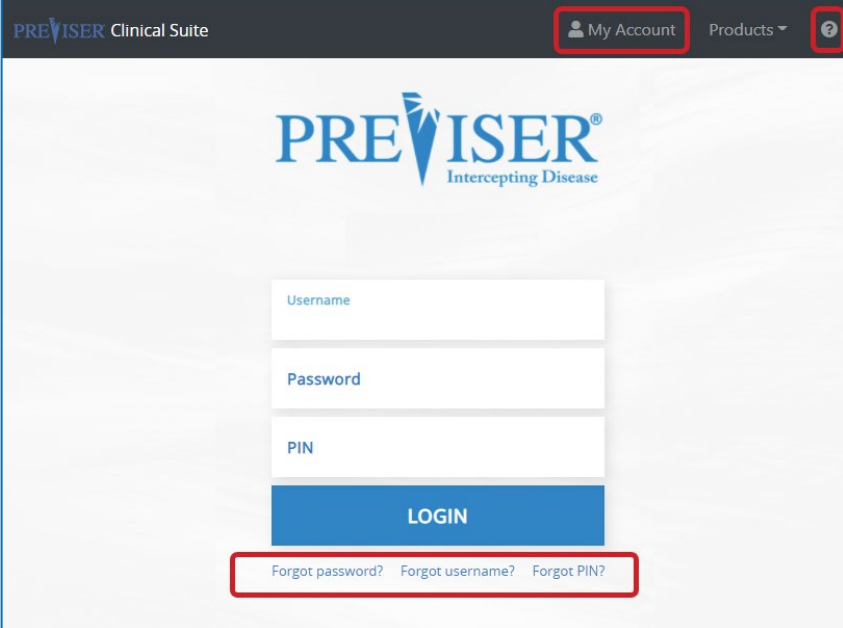

## ACCESSING THE CLINICAL SUITE

When you launch the Clinical Suite from <https://secure.previser.com/clinical>, the log in page displays.

- Clicking on **MyAccount** redirects you to the MyAccount application for account management.
- Clicking on the question mark  opens <https://www.previser.com/support/> the PreViser Support website with links to documentation, videos, trainer resources, and support contact information.

Enter the **Username**, **Password**, and **PIN** you created when you registered.

Click **Login** to display the [Browse Patients page](#).

## LOST PASSWORD, USERNAME, OR PIN

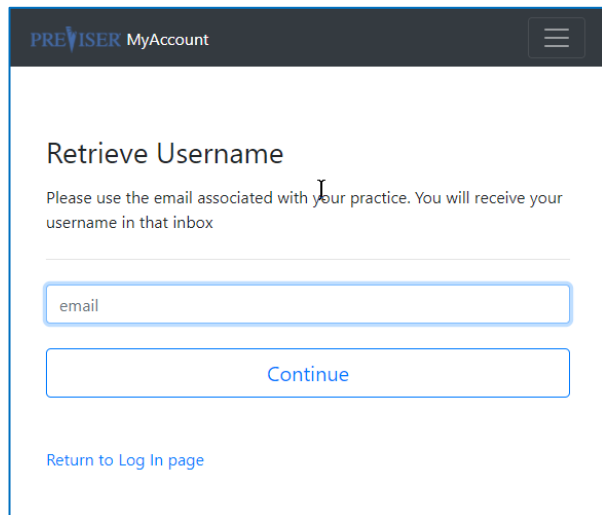

The screenshot shows the PreViser login interface. At the top is the PreViser logo with the tagline 'Intercepting Disease'. Below the logo are three input fields: 'Username', 'Password', and 'PIN'. A blue 'LOGIN' button is positioned below these fields. At the bottom of the form, there are three links: 'Forgot password?', 'Forgot username?', and 'Forgot PIN?'.

You can reset your password or retrieve your account username by entering the email address associated with your account.

The 'Reset Password' page features a dark header with the PreViser logo and 'MyAccount' text. The main content area has the title 'Reset Password' and a paragraph: 'Please use the email associated with your practice. You will receive a link to reset your password in that inbox'. Below this is an input field labeled 'email' and a blue 'Continue' button. A link 'Return to Log In page' is located at the bottom left.

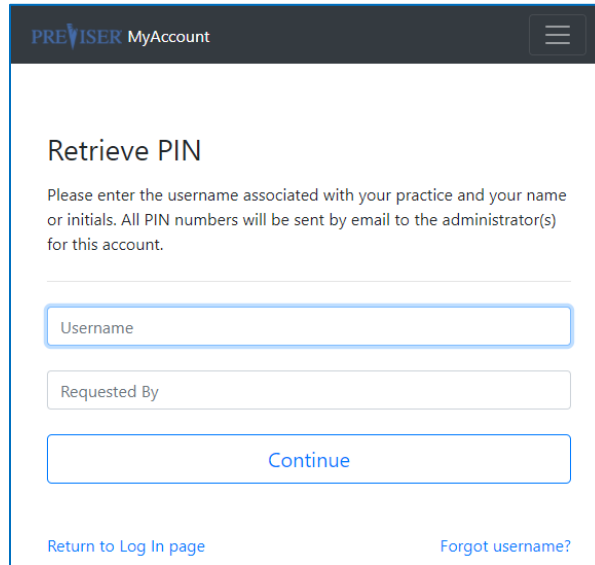

The 'Retrieve Username' page features a dark header with the PreViser logo and 'MyAccount' text. The main content area has the title 'Retrieve Username' and a paragraph: 'Please use the email associated with your practice. You will receive your username in that inbox'. Below this is an input field labeled 'email' and a blue 'Continue' button. A link 'Return to Log In page' is located at the bottom left.

continued

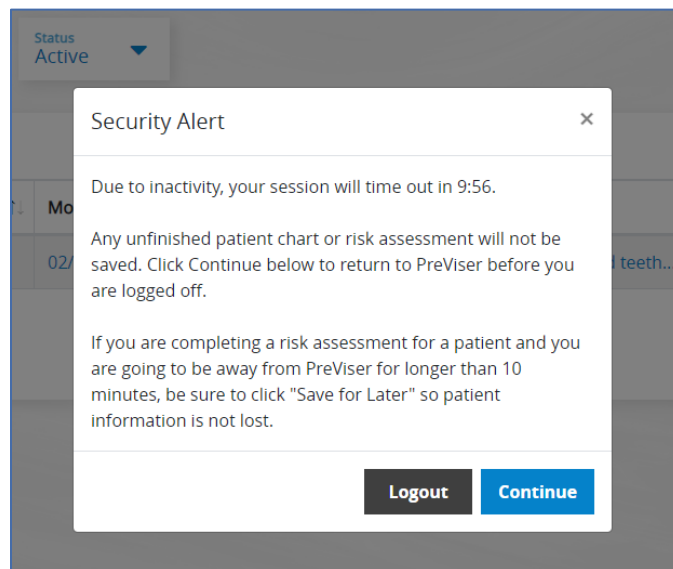

To retrieve a lost PIN, enter the account username and the name of the person asking for the PIN.

## TIME OUT FEATURE

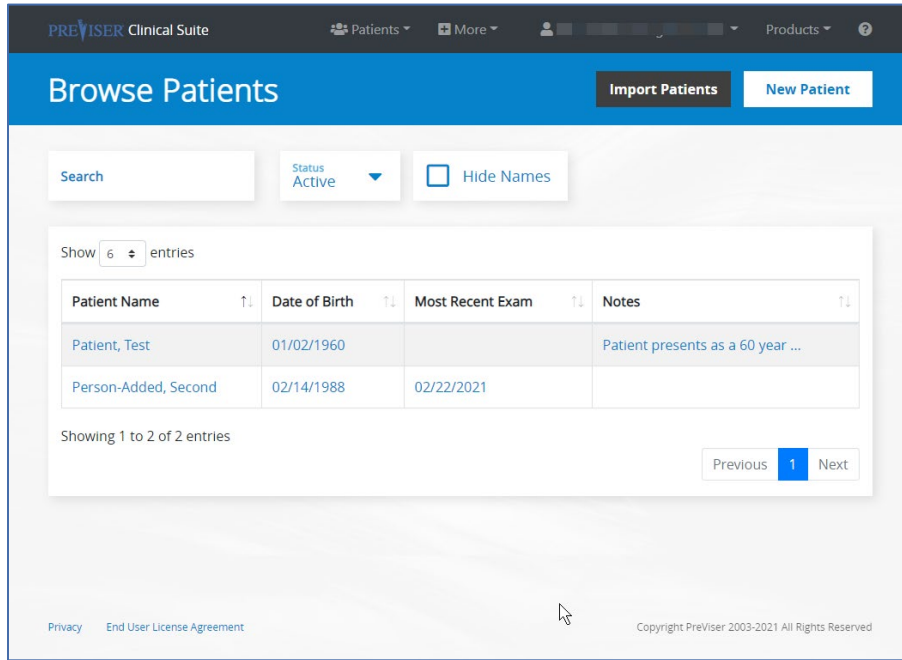

To ensure compliance with HIPAA IT security requirements, users of the PreViser Clinical Suite will see a new pop-up appear after 10 minutes of data entry inactivity. If you do not click the **Continue** button, 10 minutes after that you will be automatically logged off the system.

- ! If you are automatically logged off, **any unsaved data will be lost** and will need to be re-entered to complete the assessment. If you believe you are going to be longer than 10 minutes away from data entry, be sure to click [Save for Later](#) so you do not lose any unsaved clinical data entered.

## USING PREVISER'S CLINICAL ASSESSMENT

Once you are logged in successfully, the Browse Patients Home page displays:

### SEARCH FUNCTION

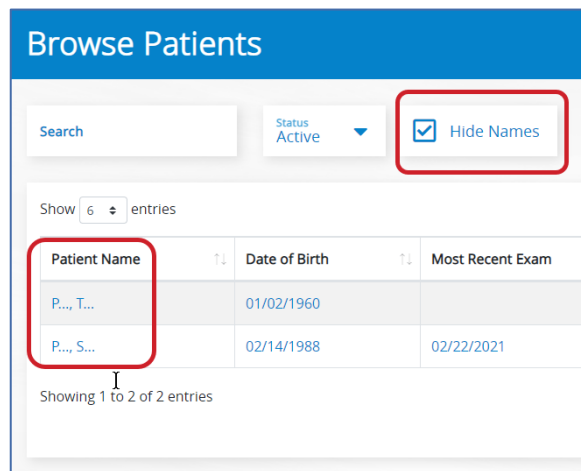

**To search by Patient Name or Notes:** type a whole or partial word in the Search field. The search filter works immediately as you enter the characters.

**To search by Date of Birth:** Type the full or part of the birthdate in dd/mm/yyyy format. The search filter works immediately as you enter the characters.

### BROWSE PATIENTS PAGE PRIVACY MODE

You can 'hide' patients' names to only show the patients' initials.

This enhances HIPAA compliance for offices by hiding protected health information if the computer monitor can be viewed by patients.

## CREATING PATIENTS

In order to assess a patient, a PreViser patient record must be created.

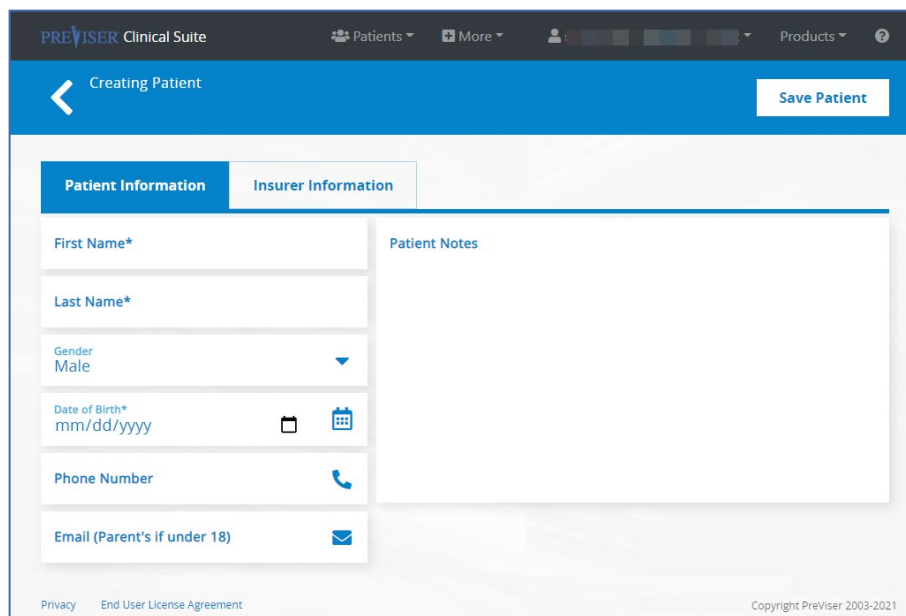

Click the **New Patient** button on the Home Page:

(Another way to do it is to click the **Patients** tab at the top, then click the **New Patient** option.)

The Patient Information page displays.

This page and the Insurer Information page are all you need to create your patient.

continued

Fill in the Patient Information fields:

- ⓘ Important! Fields **without** an asterisk are **not** submitted to the insurance carrier, i.e., any notes added to the Patient Notes section are not viewable by the insurance carrier.

<b>First Name*</b>	Required.
<b>Last Name*</b>	Required.
<b>Gender</b>	Dropdown select Male or Female
<b>Date of Birth*</b>	Required, mm/dd/yyyy format
<b>Phone Number</b>	
<b>Email</b>	Parents if under 18
<b>Patient Notes</b>	

Click the **Insurer Information** tab and select the insurer of that patient from the dropdown list.

*Note: The contents of the page will change depending on the company you select.*

If you do not see the insurer, or if the patient is uninsured, select **None/Other** from the dropdown list.

Click the **Save Patient** button.

The screenshot shows the 'Creating Patient' form in the PreViser Clinical Suite. The 'Insurer Information' tab is active. The form includes the following fields and sections:

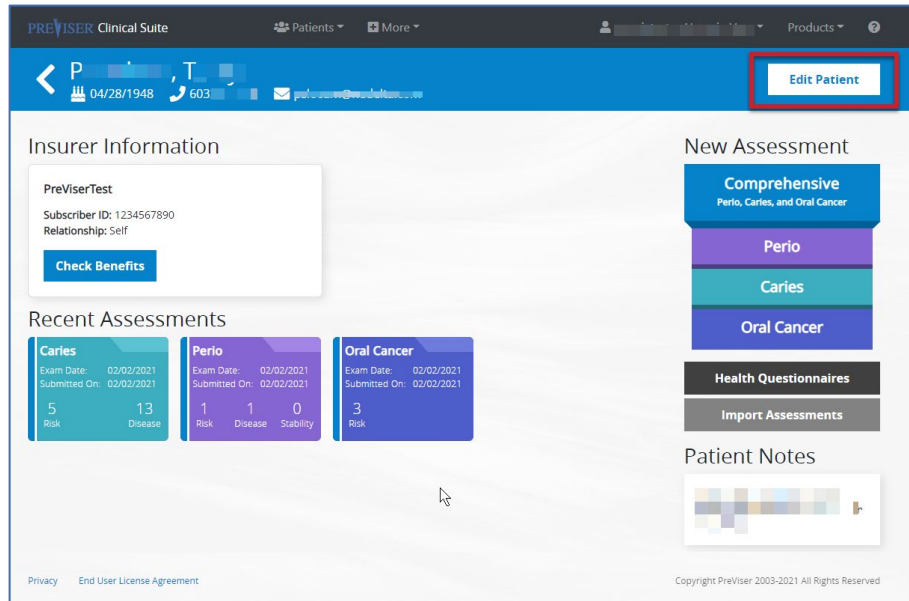

- Select Patient Insurance Company:** A dropdown menu.
- Subscriber ID\*:** A text input field.
- Group Number:** A text input field.
- Relationship of patient to subscriber\*:** A dropdown menu.
- Email (Parent's if under 18):** A text input field.
- Cell Phone (Parent's if under 18):** A text input field.
- Health through Oral Wellness® Patient Engagement:** A section with explanatory text and two checkboxes:
  - I have confirmed that this patient wishes to receive additional information about their oral health and about Delta Dental of South Dakota's Health through Oral Wellness® (HOW®) program delivered to the patient's email address.
  - I have confirmed that this patient wishes to receive additional information about their oral health and about Delta Dental of South Dakota's Health through Oral Wellness® (HOW®) program delivered via texts to the following cell phone number:

At the bottom of the form, there are links for 'Privacy' and 'End User License Agreement', and a copyright notice: 'Copyright PreViser 2003-2021 All Rights Reserved'. A 'Save Patient' button is located in the top right corner of the form area.

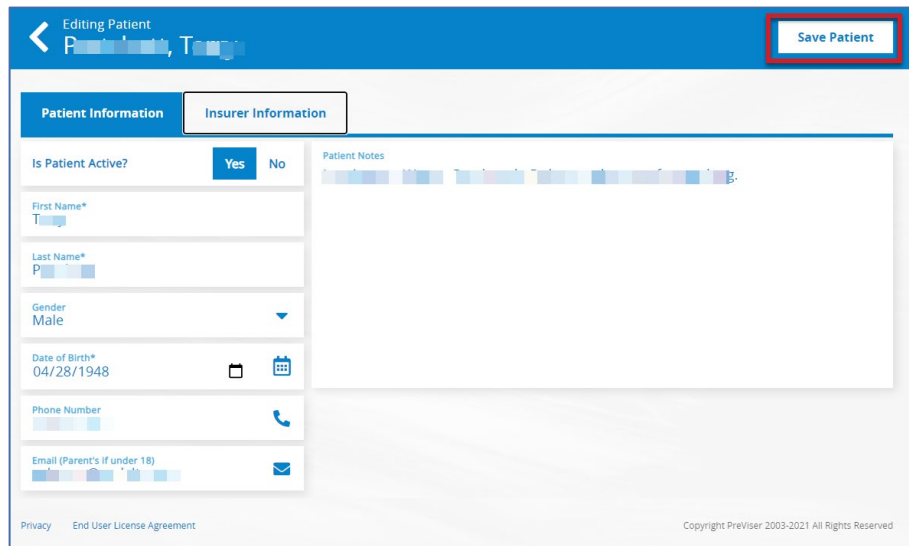

## EDIT PATIENT INFORMATION

Once a patient has had assessments performed and you select them on the Browse Patients page, the Patient Details page will look similar to this:

The Patient Notes section will only display if notes have been added.

If you need to update the patient’s demographic or insurance information, or make them inactive in the Clinical Suite, you can do so by clicking **Edit Patient**, making the update, and clicking **Save**.

## PATIENT ENGAGEMENT

If the provider selects an insurance company from the dropdown list, the provider has an opportunity to collect the patient’s email address. This will allow the insurance company to send targeted messages to the patient based on the patient’s risk and severity scores. To enable this feature, you must check the box to confirm that the “patient wishes to receive additional information about their oral health,” and enter the patient’s email address:

**Patient Engagement**

Entering the patient's e-mail address and checking the authorization box will allow your patient to receive oral wellness messaging that will increase their compliance with your recommended treatment plan.

---

I have confirmed that this patient wishes to receive additional information about their oral health.

## PATIENT VERIFICATION

When an insurance company is selected, the Clinical Suite can verify the data that you enter with the information the insurance company has on file, if the insurer has established the necessary connection to the Clinical Suite. This can vary from one insurance company to another.

If you enter information that does not match that which is in the insurance company’s records, a message will display with information about what to do next:

Insurance Verification ✕

---

Patient not found. Please verify your entries and correct. Please see FAQ/Tips for assistance. If still not found, please call our Customer Service department at 1.800. [REDACTED]

Ok

Once the patient details page has been populated, click **Save**.

If you selected **None/Other** for the insurance status, you will be prompted to verify the patient is uninsured:

Information

Confirmation Required ✕

---

No insurance selected, do you want to continue?

Cancel
Ok

Once you confirm this status, an alert message will confirm that your patient was created successfully and saved

Information

Success ✕

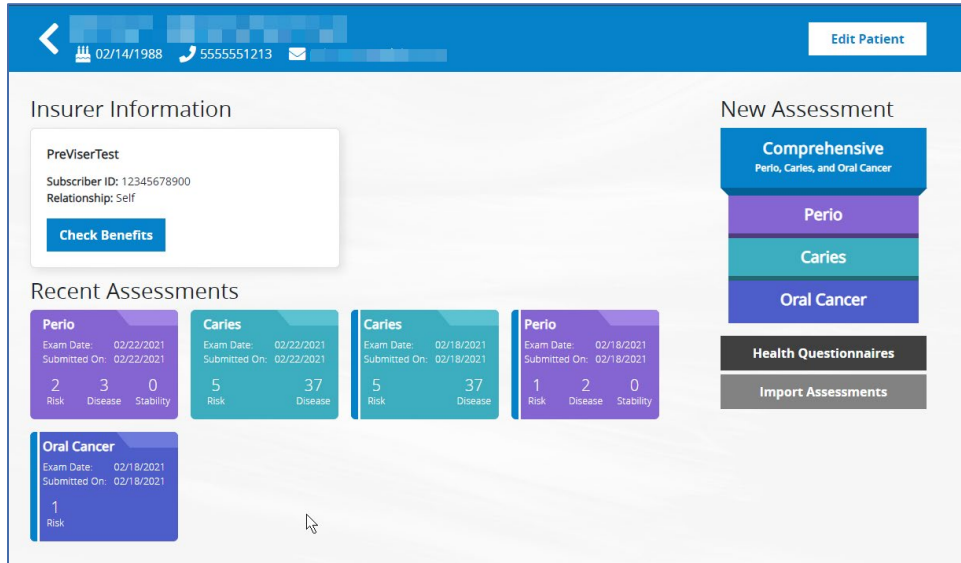

---

Patient Saved

Ok

## OVERALL ASSESSMENT INFORMATION

Select a patient you created and click one of the New Assessment choices on the Patient Details page to open and start a new **Comprehensive, Periodontal, Caries, or Oral Cancer** Assessment:

### PRE-LOADING VALUES FROM PRIOR ASSESSMENTS

After the first risk/restorative needs assessment has been done for any of the assessment types, the Clinical Suite allows you to pre-load prior entered values from a previous assessment.

In the example above, two recent Caries assessments are shown. When you click on **Caries** under New Assessment, you are given the option of starting a completely new assessment or loading the most recent values so you can update them:

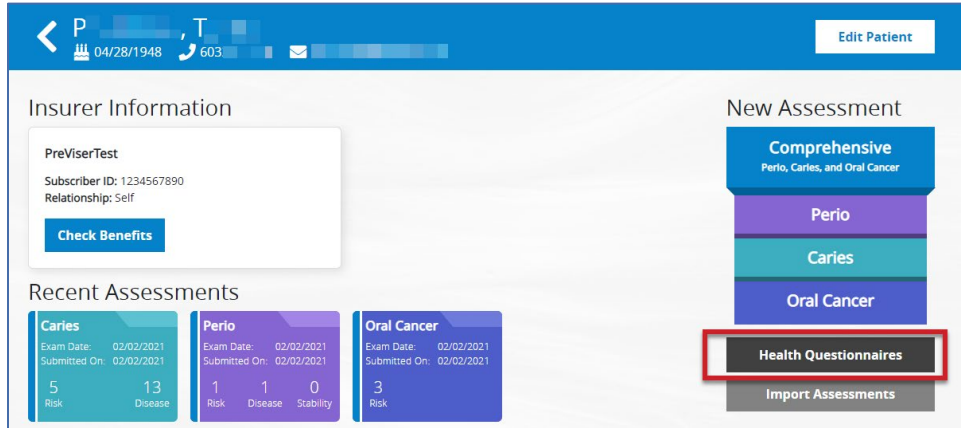

This saves time as it allows you to only address clinical conditions that have changed since the last assessment.

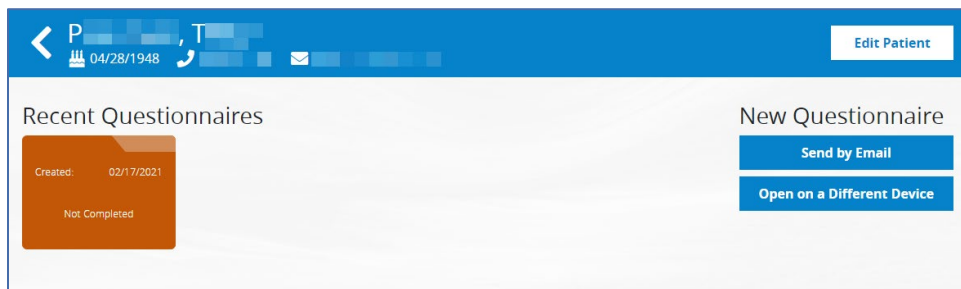

## HEALTH QUESTIONNAIRES

A health questionnaire contains assessment questions the patients can fill out themselves before being assessed by the clinician. This saves time and allows patients to be more interactive with their own oral health.

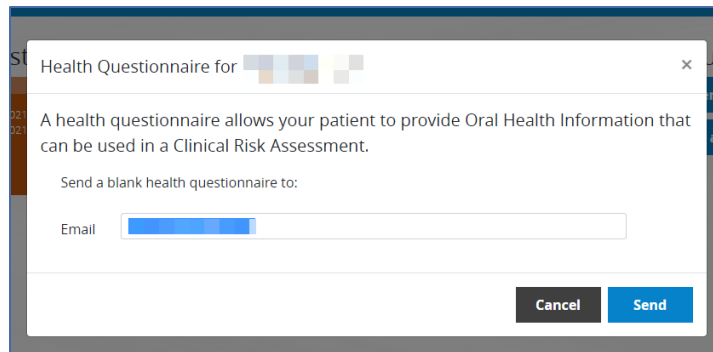

First select a patient from the patient list to view the Patient Details page and click **Health Questionnaires**:

The Health Questionnaires page displays:

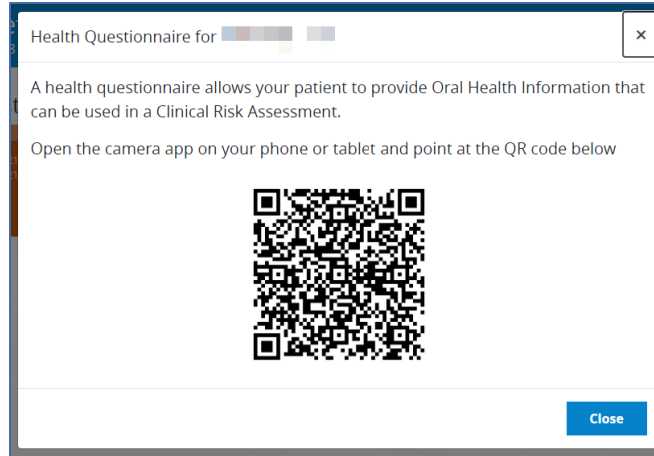

You can email the Health Questionnaire the week, day, or any time before the patient’s appointment in order to make the chair side experience quicker and more productive.

continued

Patients can also scan the Quick Response code with their smart phone or tablet to access the Health Questionnaire.

### Sample questionnaire

Do you eat snacks or beverages containing sugar 4 or more times per day?  
 Yes  No  I don't know

---

Do you drink fluoridated water?  
 Yes  No  I don't know

---

Do you use any fluoride products?  
 Yes  No  I don't know

---

Have you used any chlorhexidine oral care products for at least 1 week per month for last 6 months?  
 Yes  No  I don't know

---

Have you used any xylitol oral care products 4 times daily for the last 6 months?  
 Yes  No  I don't know

---

Have you used calcium & phosphate toothpaste in the last 6 months?  
 Yes  No  I don't know

---

Do you drink alcohol or recreationally use drugs?  
 Yes  No  I don't know

---

Have you had a major change in health (i.e. heart attack, stroke) in the last 12 months?  
 Yes  No  I don't know

---

Do you have or have you ever had oral cancer?  
 Yes  No  I don't know

---

Do you smoke, or have you ever smoked cigarettes?  
 Yes  No

---

Do you smoke, or have you ever smoked Cigars or Pipes?  
 Yes  No

---

Do you use or have you ever used smokeless tobacco?  
 Yes  No

---

How often do you drink alcohol?  
 Never  Less than 1 drink per day  1 drink per day  2 drinks per day  3 or more drinks per day  I don't know

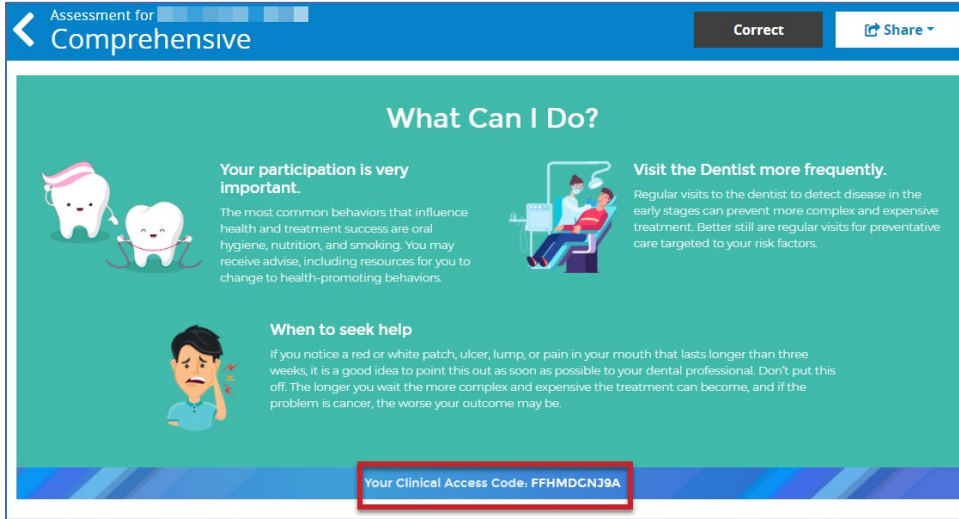

---

What is your diabetic status?  
 I do not have diabetes  good control  fair control  poor control  I don't know

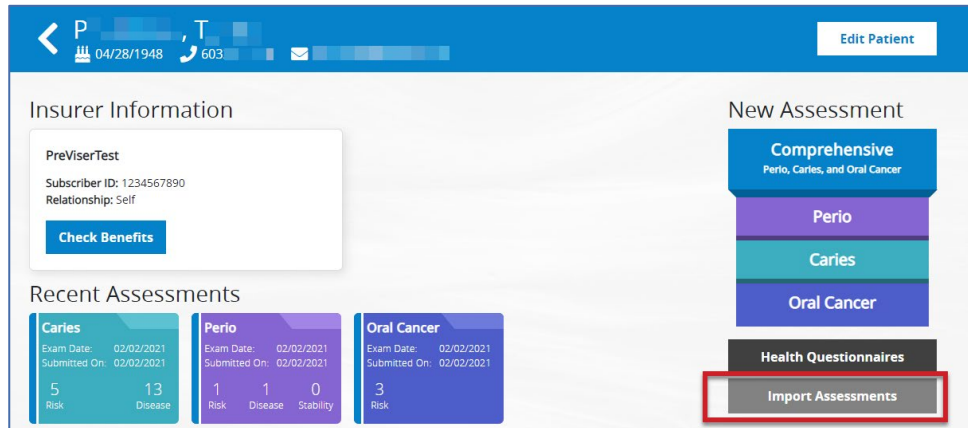

Powered by PreViser © Corporation

## IMPORTING ASSESSMENTS FROM OTHER PRACTICES

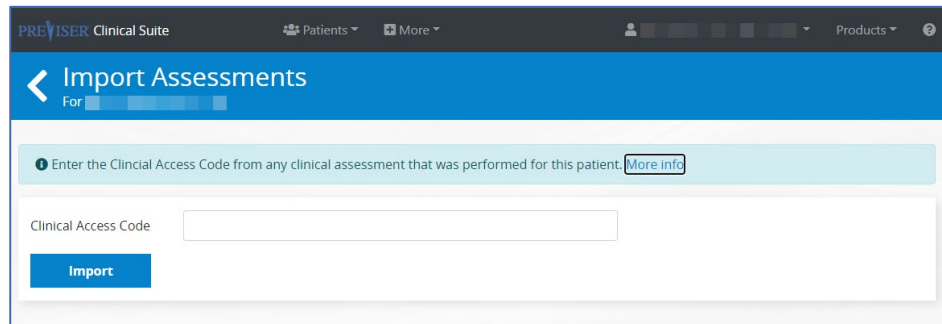

If a new patient comes to your practice from an office that uses PreViser and has performed PreViser assessments in the past, you are able to use that previous data. You can ask that patient to bring in an old report or you can reach out to the patient’s former dental provider and ask for the Clinical Access Code which is located below the “What Can I Do?” section of any of that patient’s reports.

Once you receive that access code, click **Import Assessments** on the patient page:

Type in or copy/paste the Clinical Access Code and click **Import**.

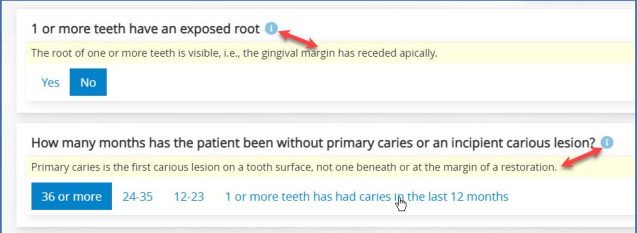

The top of the following page should display how many assessments imported successfully:

## PERFORMING AN ASSESSMENT

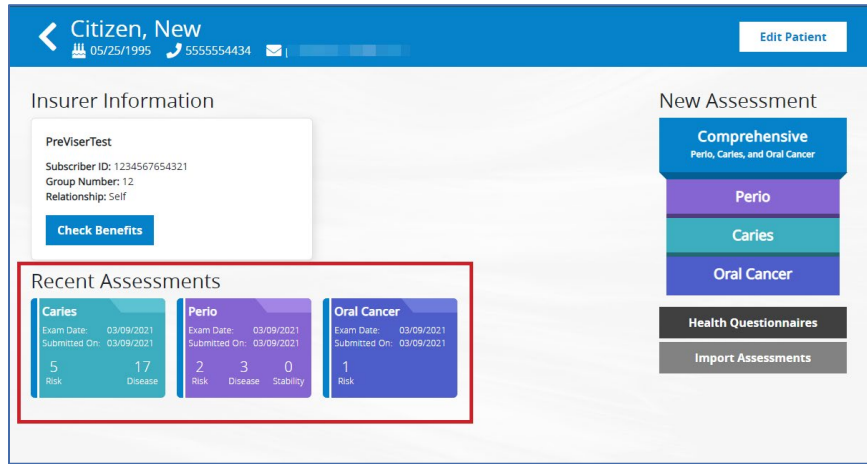

If any of the assessments are selected (Caries is used as the example below) and you begin the assessment, the following page displays:

The screenshot shows the 'New Assessment for Test Patient' interface for 'Caries'. At the top, there are buttons for 'Model This Patient', 'Save for Later', and 'Submit'. Below this, there are fields for 'Exam Date' (03/09/2021), 'Prepared By', and 'Responsible Clinician'. A message prompts the user to 'Please select the dentist responsible for this patient's care from the list.' The main assessment area contains two questions: '1 or more teeth have an exposed root?' with 'Yes' and 'No' buttons, and 'How many months has the patient been without primary caries or an incipient carious lesion?' with radio button options: '36 or more', '24-35', '12-23', and '1 or more teeth has had caries in the last 12 months'.

<p><b>Exam Date</b></p>	<p>The date the assessment was performed. The current date is the default. Generally, this is going to be within a day or so of when the assessment data is entered. However, clinicians may wish to create a record of the patient’s PreViser scores by entering data from prior examinations. You can adjust the exam date to reflect the prior dates with corresponding clinical information for those dates.</p> <p><b>Note:</b> if the exam date is more than 90 days in the past for a finished assessment, the Correct function is disabled.</p>
<p><b>Prepared By</b></p>	<p>The person who is performing the assessment. Will match the clinician logged in to the Clinical Suite with their PIN.</p>
<p><b>Responsible Clinician</b></p>	<p>This is the clinician who is ultimately responsible for the care of the patient, typically a dentist or independent practicing hygienist.</p>
<p> <b>Contextual help for all clinical assessment questions</b></p>	<p>Select the ‘i’ icon next to the questions for additional clarification.</p> 
<p><b>Submit</b></p>	<p>When selected, the data you have recorded will be submitted to the PreViser web service and a patient report will be returned, including the Report Settings you selected. If an insurance company has been entered and successfully saved, the scores will also be sent to the patient’s dental insurance company.</p>
<p><b>Save for Later</b></p>	<p>This option allows the unfinished assessment to be saved without submitting and for the clinician to come back to finish at a later time.</p>
<p><b>Model this Patient</b></p>	<p>This is a hypothetical option. When selected, the assessment is not saved. This is a tool you may use to demonstrate to patients what they can do to improve their scores.</p>

## RECENT ASSESSMENTS

Once a patient has been assessed and you return to the patient page for that person, a new section will appear on this page that shows all prior assessments. Example:

The type, date, and scores for the assessment are shown, where:

**Risk** = the risk of the patient for the disease type; and

**Disease** = the restorative needs or periodontal disease severity scores;

**Stability** = is the periodontal disease stability score for the patient.

Where **Unfinished** appears instead of scores, this will be an assessment that was not completed but saved to complete later.

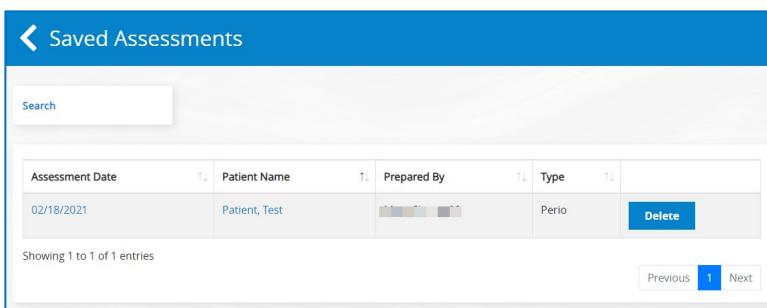

**Note:** If you select to **Model This Patient**, the assessment will not appear in this section because modeled assessments are not recorded in the PreViser database and disappear once you close the modeled patient report.

Accessed through the top navigation bar, the **Saved Assessments** link gives access to all assessments you selected to **Save for Later** rather than Modeling or Submitting the assessment.

Example:

Click **Assessment Date** to display the data input page for the unfinished assessment. You can then provide the missing information before submitting the assessment by clicking **Submit**. Alternately, you can delete the unfinished assessment by clicking the **Delete** button.

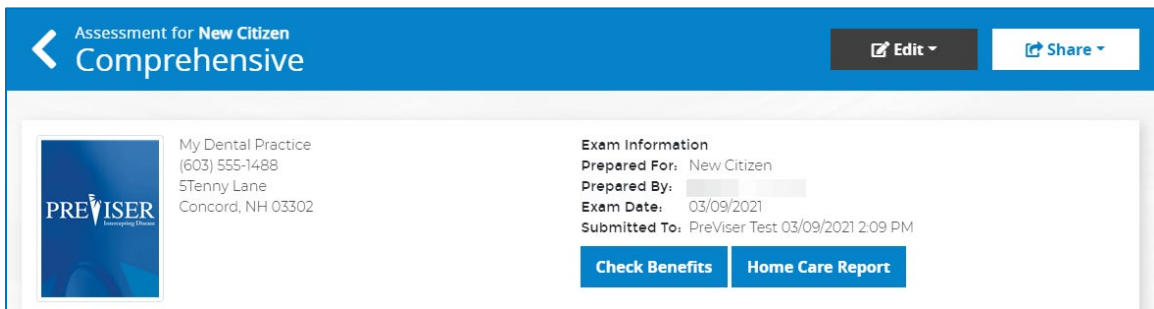

## HOME CARE REPORT (HCR)

### OVERVIEW

Professional recommendations for self-care and home care products are a critical component in optimizing patient oral health outcomes. If your Settings have the Enabled button checked for the Home Care Report, your assessments will display a Home Care Report button.

Click the **Home Care Report** button at the top of assessments to display home health care product recommendations. These are personalized oral care products based on the patients' risk and disease scores.

Recommendations that are automatically made when both perio and caries risk scores are present use the following logic:

Whatever the highest risk is, use the recommendations for that risk category. If both perio and caries risk scores are the same value, use the caries risk product recommendations.

For the initial launch of the Home Care Report, PreViser collaborated with Colgate, who provided images and text to go along with the products that they believe you might consider for a given risk and product category.

However, you are free to recommend any alternative product you think best for your patients.

Click the **Customize** button to further customize care plans.

**Prepared For:** New Citizen

**Prepared By:** [Redacted]

**Exam Date:** 03/09/2021

### Our recommendations for appropriate home care products

Our home care product recommendations are generally based on the highest risk score calculated for you based on your examination. Our experience is that the following products will likely help you maintain the best oral health possible and avoid future disease.

Tooth Decay Risk Score: 5

Gum Disease Risk Score: 2

**Toothpaste**

AM: Colgate® TotalSF

Fights harmful bacteria on 100% of mouth surfaces\*. Now with sensitivity relief. \*Colgate Clinical Report 20180316BAC

**Manual Brush**

COLGATE® 360® TOOTHBRUSH

Revolutionizes oral care by cleaning the teeth, tongue, cheeks and gums and removes more Bacteria. Multi-level bristles to remove more plaque in between teeth. Raised cleaning tip cleans hard-to-reach places.

**Prescription Toothpaste**

PM: 5000 PPM RX TOOTHPASTE

Because of one or more risk factors your teeth are more vulnerable to tooth decay and cavities. To help protect against further decay, brushing with a prescription level fluoride toothpaste daily helps strengthen tooth enamel to protect against the effects of decay causing acids. Using a 5000ppm toothpaste as prescribed could benefit your oral health by: Fewer areas of decay, Stronger teeth, and Fewer cavities, reduced fillings.

*The products identified in this report have been selected or identified by your treating dentist and/or hygienist based on his or her clinical judgment, your PreViser scores, and your statements to your treating dentist or hygienist. These product recommendations are not prescriptions, nor are they intended to establish a standard of care. They are not a substitute for professional judgment, advice, diagnosis, or treatment. Neither PreViser Corporation nor the product manufacturer(s) make any warranty, express or implied, as to the suitability, availability, or clinical efficacy of the recommended products.*

## EDITING AN INDIVIDUAL HOME CARE REPORT

When you click the **Customize** button, the Home Care Report can be changed according to your wishes.

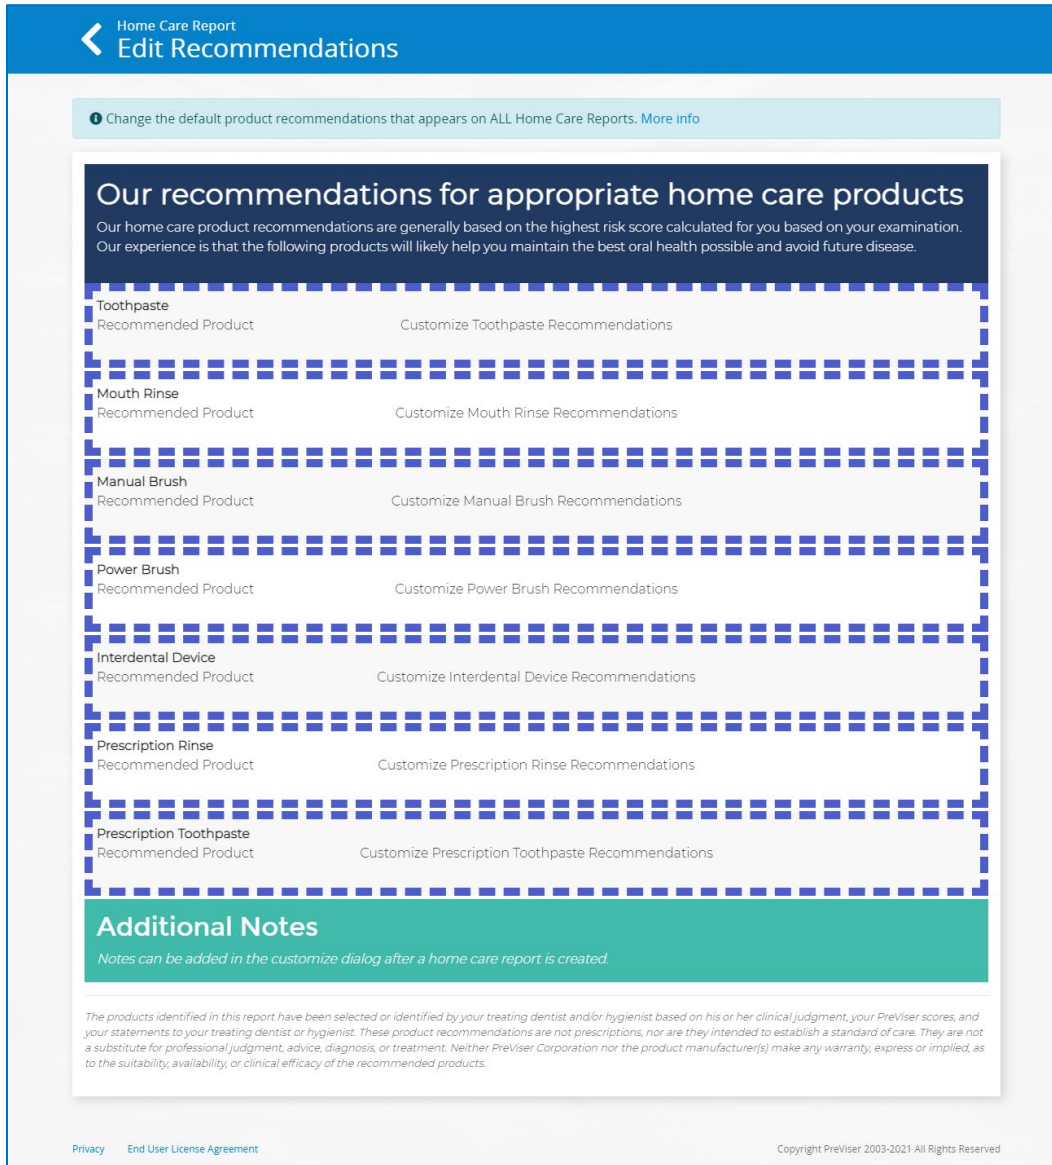

The areas inside the purple dotted lines are areas that already appear on the report and can be customized or removed.

The areas that display “Show ...” can be added and customized.

Changes to a specific patient’s report will be tracked only with that patient’s associated risk assessment. OR as the Admin of the account, you can change the default product recommendations for all Home Care Reports in the settings menu.

## EDITING HOME CARE REPORTS FOR WHOLE PRACTICE

When **Edit Recommendations** is selected, the following screen will display:

There are seven different product categories you can hide or optionally suggest as beneficial for a given risk category – Toothpaste, Mouth Rinse, Manual Tooth Brush, Power Tooth Brush, Interdental Device, Prescription Mouth Rinse, and Prescription Toothpaste

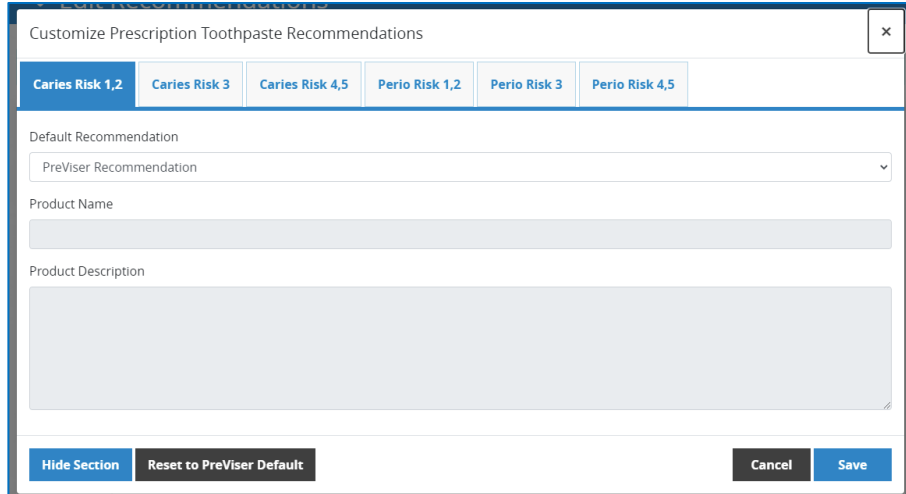

Click anywhere inside the purple dotted lines to make the appropriate changes.

Inside the different product categories, you have the option of making product recommendations for six risk categories –

- caries risk 1 or 2 (very low and low),
- caries risk 3 (moderate),
- ,
- caries risk 4 or 5 (high and very high),
- perio risk 1 or 2 (very low and low),
- perio risk 3 (moderate),
- ,
- perio risk 4 or 5 (high and very high).

You can also customize a Product Description.

At the top of this page, you'll see the different risk categories arranged as tabs on the page. You can alter the recommendation for a risk and product category by selecting **My Practice Recommendations** from the dropdown menu.

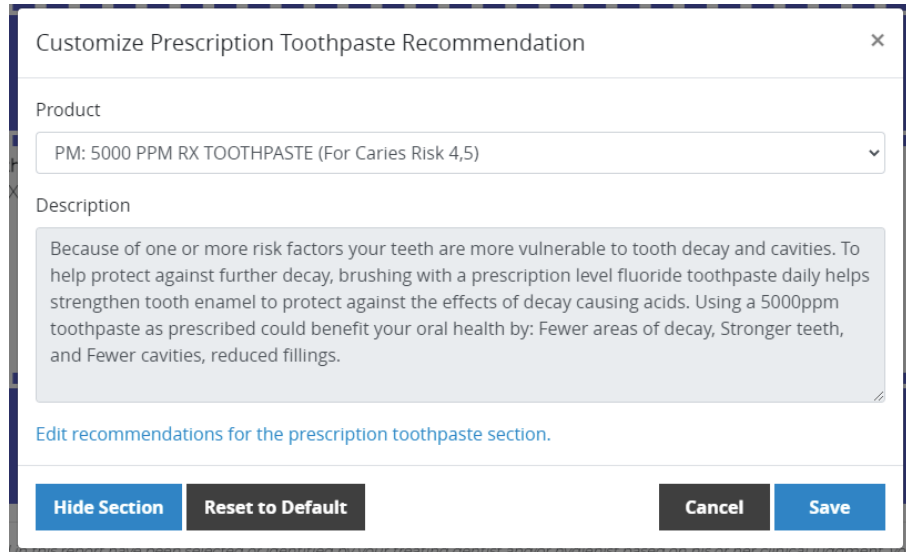

Within each risk category are the seven product categories that allow you to manage in one of three ways:

**Hide Section** removes the section completely.

**Reset to PreViser Default** returns to the recommendation Colgate has made for the products they believe are appropriate for the risk category.

**Cancel** closes the page without saving any changes.

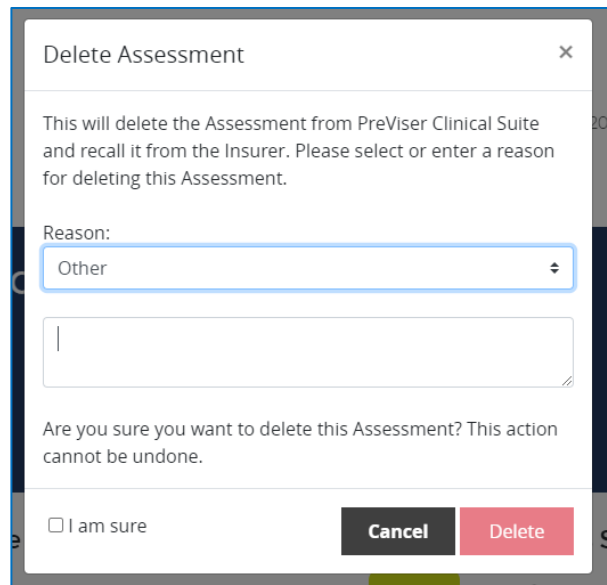

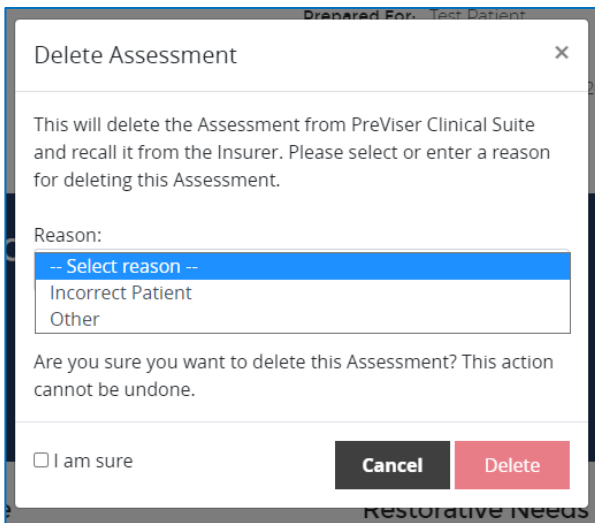

## DELETING ASSESSMENTS

An assessment may be permanently deleted by clicking the Delete menu entry of an assessment.

**Caution:** This action cannot be undone.

A reason for deleting an assessment must be provided. Select either **Incorrect Patient** or **Other**.

If you select **Other**, a text box where you can supply your own explanation opens.

Check the **I am sure** box to enable the Delete button.

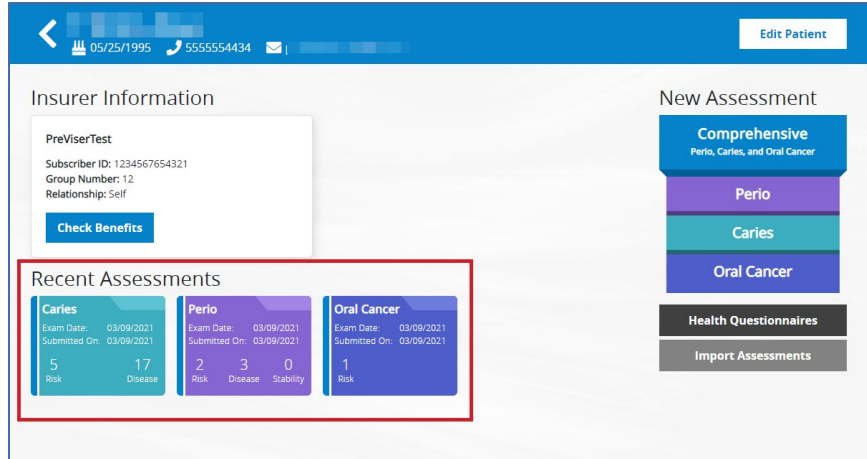

Click the **Delete** button.

A notification will be sent to the patient's insurer that the assessment was deleted.

**Note:** After 90 days, you will not be able to Delete an assessment.

## REPORT OVERVIEW

After assessments have been performed, clinicians are able to view the reports anytime, whether the assessment was just performed or is an older one selected from the **Recent Assessments** list on the Patient Details page.

### Assessment Report Header

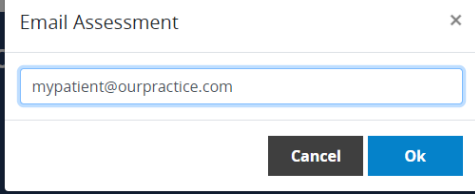

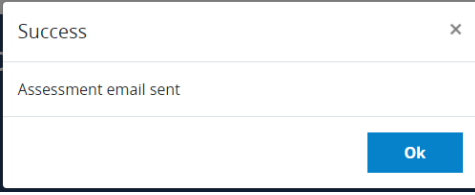

The top of the report includes the assessment type (Caries is used as the example below) and name of the patient as well as other information and functionality:

	<p>Click this link at the top of the report to return to the Patient Details page for the patient being assessed.</p>
<p>Your Image</p>	<p>An image meeting specifications (refer to the Picture/Logo section of the MyAccount document) will display on the patient report. Generally, this will be an image of the dentist, staff, or the office.</p>
<p>Edit/Correct</p>	<p>To correct an error made while entering the clinical observations, click <b>Edit</b> then click <b>Correct</b> to return to the form and make your changes. Click <b>Submit</b> to resubmit the assessment. A corrected report will replace the incorrect one when the data is sent to an insurance company for oral health communication or benefit determination.</p>
<p>Share/Print</p>	<p>Click <b>Share</b> then click <b>Print</b> to direct the report to a printer.</p>

continued

<p><b>Share/Email</b></p>	<p>Click <b>Share</b>, then click <b>Email</b>, then <b>OK</b> to email reports to patients.</p> <p><b>Note:</b> <i>The email address defaults to the one on file for the currently selected patient. You can type over the default address to direct it to another address.</i></p> <p>Click <b>OK</b> to acknowledge the successfully sent message.</p>	 
---------------------------	---	--

**Clinical Inputs**

After you have completed a risk assessment, the Clinical Inputs can be displayed in full, easily accessed, and printed. This is a simple but effective way to evaluate the oral health data of your patients and calibrate clinical input from clinicians.

## REPORT OPTIONS - PERIO

Once the data input form for the Perio risk assessment is completed, select from the following options to be included in the report:

Report Settings

Treatment Options

Do you wish to indicate the use of laser therapy?

### Treatment Options

This is a selectable feature and, if the box is checked, suggested treatments will be included in the report.

**To help maintain or improve the health of your gums:**

**Pockets less than 5mm**

Pockets that are less than 5mm deep can have the most thorough removal of bacteria and calculus. However, all deep pockets were at one time less than 5mm with the optimal probing depth being 3mm or less.

**Pockets 5-7mm**

Pockets in the 5 to 7 depth range cannot be cleaned with a toothbrush and floss, and professional cleaning instruments don't always reach the bottom of the pocket. Incomplete removal of plaque and calculus results in deeper pockets and tooth loss.

As noted on the report, these possible therapeutic recommendations will apply unless the patient is “stable and without inflammation.” This exception is noted since a patient may have residual pocketing or bone loss but lack current inflammation, so active intervention is not needed in preference to maintenance procedures.

### Do you wish to indicate the use of laser therapy?

If lasers are part of your armamentarium, you can check this box and an additional message will appear in the Treatment Recommendations section. Example:

*Our office uses the latest in laser technology to ensure the best outcome for our patients. The use of lasers may influence which therapy is the most suitable for you.*

## THE PERIO PATIENT REPORT

### Periodontal Disease Risk

The PreViser patient reports are designed to give the patient clear scores for oral disease risk and severity. For periodontitis, the report delivers a [scientifically validated](#) 1 to 5 score for perio risk. This score is a reflection of the likelihood that the patient will develop periodontitis, or that existing perio severity will worsen. Example:

### Periodontal Disease Severity

This score is a reflection of current perio severity on a 1 to 100 scale where:

- A score of 1 is perfectly healthy mouth without bleeding, pocketing or bone loss;
- A score between 2 and 3 indicates sextant bleeding on probing (gingivitis) but no pocketing or bone loss;
- A score between 4 – 10 indicates mild periodontitis;
- A score between 11 – 36 indicates moderate periodontitis;
- A score between 37 – 100 indicates severe periodontitis.

Within each of these ranges the condition varies between localized to generalized, and each increment in the score represents a measurable improvement or deterioration in periodontal status. Example:

**Hint:** A patient who has experienced periodontitis and bone loss won't grow back that bone, so their score can never return to a score of "1." However, without inflammation, the patient can be considered to be "Stable" in the sense that they are not suffering from continuing deterioration or current inflammation.

**Periodontal Disease Stability**

This score is a reflection of how long the patient has been stable with unchanged scores. The purpose of this score is to "reward" and motivate patients whose risk and severity scores are constant by having their stability continue to climb. The score will always start at a baseline of zero, and continue to rise at a maximum of 10 points per year, not exceeding 100 points which represents 10 full years of periodontal stability. The graphic below indicates that the patients' periodontal status has remained stable for 4 years. If the patient was stable for 4.5 years, the patient's score would be 45. If the patient's periodontal status regresses, or the patient's exhibits periodontal bone loss, the gum health stability score would reset to zero. Example:

**Gum Health Stability Score**

0

out of 100

\* Higher score is better

The gum health stability score informs whether or not your gum health is stable (unchanged [stable] or worsened condition). The first gum health assessment always results in a score of zero (0). As your gum health is assessed over time, the score will increase by 10 points for every year of gum health stability, reaching a maximum of a score of 100 indicating 10 years of stability. If your gum health worsens, the score will return to a score of zero (0).

Below is a brief guide on how to improve one's periodontal health:

## Gum Disease and You.

Knowing your gum health scores is the first step in improving, or maintaining the health of your gums. Here are other simple steps you can take:

- Talk to your dentist about managing any factors that contribute to elevated risk of disease.
- Ask your dentist how gum disease may impact other serious health ailments such as heart disease, Alzheimer's, strokes and diabetes.

If Treatment Options were indicated to be included in Report Settings before the data was submitted to PreViser, those print, followed by the Clinical Inputs you provided that generated the scores shown on the report.

An example of the full Periodontal Disease Patient Report can be found in [Appendix A](#).

**CARIES ASSESSMENT**

From the Patient Details page, you can perform a caries risk and severity assessment by clicking the **Caries** link:

## REPORT OPTIONS - CARIES

Once the data input form for the caries risk assessment is completed, select from the following options to be included in the report:

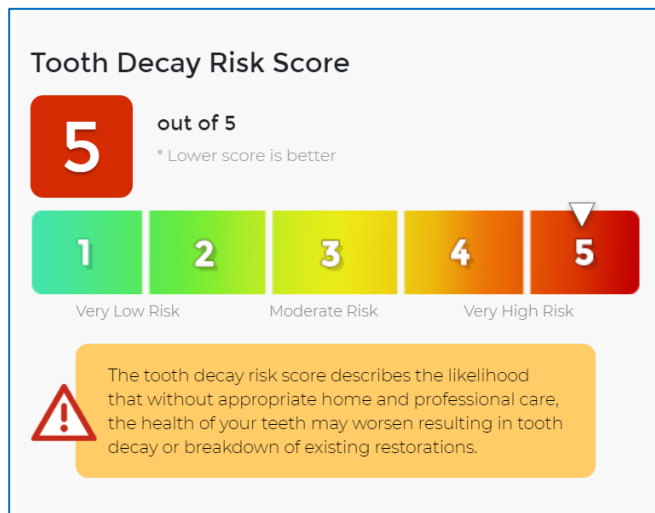

Report Settings

Treatment Options

### Caries Risk

The PreViser patient reports are designed to give the patient clear scores for oral disease risk and severity. For caries, the report delivers a 1 to 5 score for caries risk based on the Caries Management by Risk Assessment (CAMBRA) approach to risk determination. This score is a reflection of the likelihood that the patient will experience new caries, or that existing restorations will become defective. The Clinical Suite caries risk method expands the concept of CAMBRA, which predicts primary caries, to include secondary caries. Example:

In this example, the patient presents with a High risk of new defects and would then be a prime candidate for adult sealants, fluoride treatments and regular dental care. This score can be used to help the patient understand why professional oral care is so important.

### Restorative Needs Score

This score is a reflection of the current status of the dentition on a 1 to 100 scale where:

- A score of 1 is a pristine dentition without carious lesions or any restorations.
- A score between 2 and 9 is a sound dentition with no current defects but with an increasing percentage of the total dentition in a restored state as the score increases from 2 to 9.
- A score between 10 and 100 represents a dentition with current active treatment needs, either due to a new carious lesion or because an existing restoration is defective. As the score becomes greater, a greater percentage of the total dentition is affected by a defect. A score of 100 would indicate that all teeth in the dentition have a defect.
  - Example: If a patient has only one tooth remaining, and that tooth had a lesion, the restorative needs score would be 100. When restored, the score would drop to 9.
  - Example: If a patient has a full dentition, and one tooth had a lesion the restorative needs score would be 10. When restored, the score would drop to 2. Example:

In this example, the patient presents with Moderate Needs as indicated by a restorative needs score of 19. This equates to up to three defects that require therapeutic intervention.

In addition to a risk and restorative needs score, the caries patient report includes other elements of interest:

**Tooth Health and You**

This section gives the patient a quick summary of strategies that can help improve their oral health. Example:

**Tooth Health and You.**

Knowing your risk of tooth decay and the current health of your teeth is the first step in maintaining or improving the health of your teeth. Here are the other simple steps you can take

- Talk to your dentist about managing the risk factors that may contribute to tooth decay
- Brush twice a day with fluoride toothpaste
- Clean between your teeth daily with floss or an interdental cleaner

**Treatment Options**

As discussed above, this section of the report describes the preventive activities that may be helpful to improving the patient’s oral health. It can be optionally printed by checking the box in the Report Settings section.

An example of the full Caries Patient Report can be found in [Appendix A](#).

### REPORT OPTIONS – ORAL CANCER

Once the data input form for the Perio risk assessment is completed, select from the following options to be included in the report:

### Oral (Mouth) Cancer Disease Risk

PreViser patient reports are designed to give the patient clear scores for oral disease risk and severity. For oral cancer, the report delivers a risk score from 1 to 5. This score is a reflection of the possibility that the patient will experience an oral cancer lesion. Example:

**Note:** Because a person has elevated risk for mouth cancer does not mean they are likely to experience this terrible, if infrequent, disease. Rather, it means that they have exhibited risk factors that increase the possibility of developing the disease. It is helpful to explain to a patient that just because your home is at elevated risk for catching on fire due to the proximity of flammable brush or trees surrounding the home it doesn't mean the house will catch on fire - just that the risk factors increase that possibility. The oral (mouth) cancer risk score is designed to encourage the patient to reduce the risk factors associated with the disease, like the use of smokeless tobacco or alcohol.

A brief discussion of Oral Cancer and You is provided. Example:

## Oral Cancer and You.

Am I at risk?

Anyone can get oral cancer. The most common factors for oral cancer are:

- Over 40 years of age
- Use of any type of tobacco product
- Regularly drink alcohol
- Exposure to the HPV virus

How do I reduce my risk?

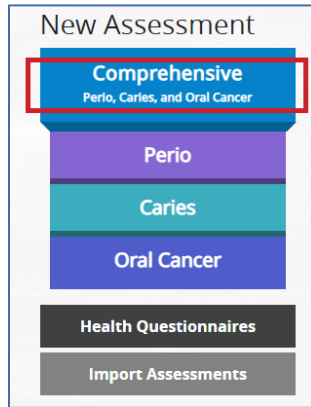

Lifestyle factors like tobacco, alcohol use and poor dental hygiene can be managed with a subsequent reduction in the risk of mouth cancer. In addition, recent research has indicated that exposure to the HPV 16 virus that can be sexually transmitted is a significant risk factor for oral cancer, and may be responsible for the increasing incidence of mouth cancers in younger populations.

If you select **Treatment Options** in **Report Settings** before submitting the clinical data to generate the report, those recommendations will be included. **Clinical Inputs** will also display and can be printed optionally to help guide the patient on what risk factors may be elevating their risk scores.

An example of the full Oral Cancer Patient Report can be found in [Appendix A](#).

## COMPREHENSIVE ASSESSMENT

The comprehensive assessment includes the questions and a ‘What’s Changed’ section from all three assessments (caries, perio, and oral cancer). It would typically be done as the first PreViser assessment on a patient; or when a patient first presents for services; or on request from an insurer. It combines the caries, perio and oral cancer assessments into one document, and while it takes time to complete, provides a comprehensive guide to the complete treatment plan a new or existing patient will benefit from.

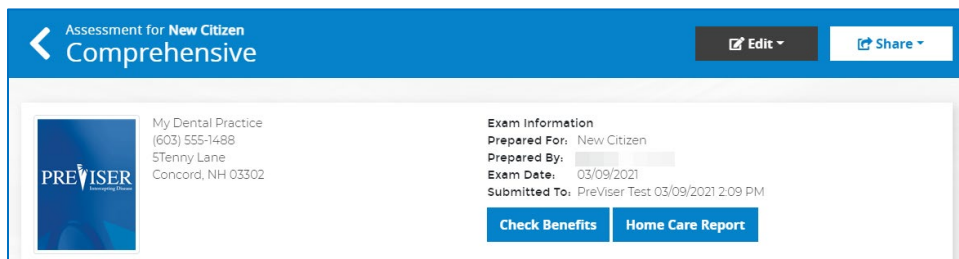

An example of the full Comprehensive Patient Report can be found in [Appendix A](#).

## RETURN OF BENEFITS

Some insurance carriers offer a return of benefits after an assessment has been completed for a [verified patient](#). This feature offers the dental office and clinician chair-side return of benefits which includes maximum allowance, remaining allowance, limitations and enhanced benefits if a patient qualifies for additional benefits based on the patient’s Clinical Suite scores, to name a few.

### CHECK BENEFITS

After assessment has been submitted, the top of the report will display a **Check Benefits** button for a verified patient. **Note:** *This button will not display for a patient with no insurance, or a patient who has an insurance carrier that does not support this feature.* In order to access the benefits of the patient, click the **Check Benefits** button at the time the report is generated. The **Check Benefits** button will not display on previous assessment reports.

## BENEFIT RETURN DISPLAY:

When you click **Check Benefits**, the current benefits of the verified patient displays:

Information displayed on this website is based on current available benefits and patients' eligibility. It is possible this information may change, even retroactively, based on information provided by the account. Should changes occur in eligibility or benefits, there is no guarantee of payment.

Enhanced Benefits provided by Mock Delta Dental

## ADDITIONAL ENHANCED BENEFITS INFORMATION:

After the benefit return displays, you also have the option to expand on the enhanced benefit plan design for the patient, by clicking **Click Here**, as seen below. The copy button copies the text in the Additional Benefits window allowing you to paste it for reference later.

Additional Benefits

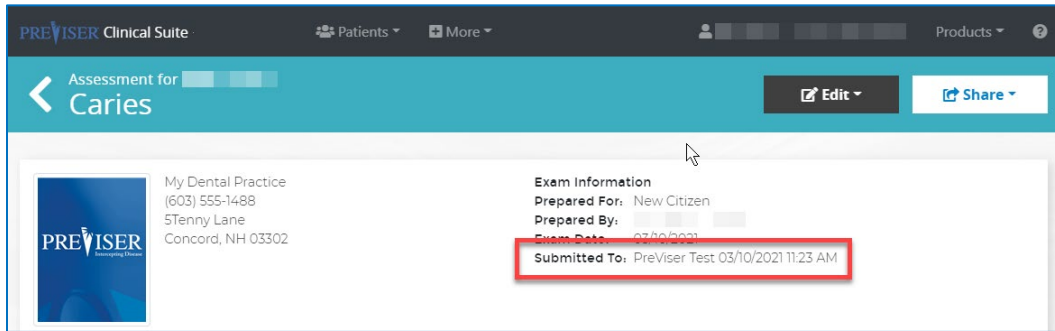

This individual has additional benefits for both CRIES and PERIO through the Health through Oral Wellness program, which includes the caries susceptibility test (D0425) once per 12 month period; prophylaxis (D1120, D1110, D4346, D4910) combination up to 4 per 12 month period or per calendar year; and Full Mouth Debridement (D4355) once per lifetime, which counts toward the frequency for cleanings. Fluoride treatments (D1206/D1208) with no age restrictions-combination up to 4 per 12 month period or per calendar year; Sealants with no age restrictions (D1351) for unrestored primary molars and for unrestored permanent bicuspids and molars; and either one Nutritional Counseling (D1310) or Tobacco Cessation Counseling (D1320) or Oral Hygiene Instruction (D1330) is covered in a 12 month period.

Copy Ok

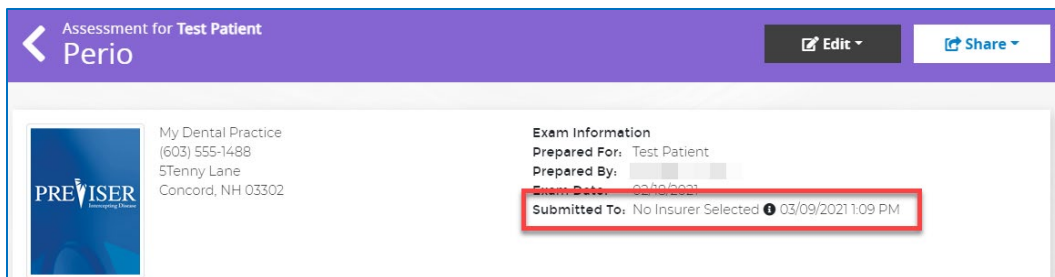

**Note:** The return of benefits information can only be accessed at the time the finished report has been completed and the Clinical Suite report displays. In other words, you cannot access the return of benefits on any saved reports, because the benefits may not be current.

## SUBMITTED TO INSURER STATUS:

This reports the date, time, and insurance company to which the assessment was submitted.

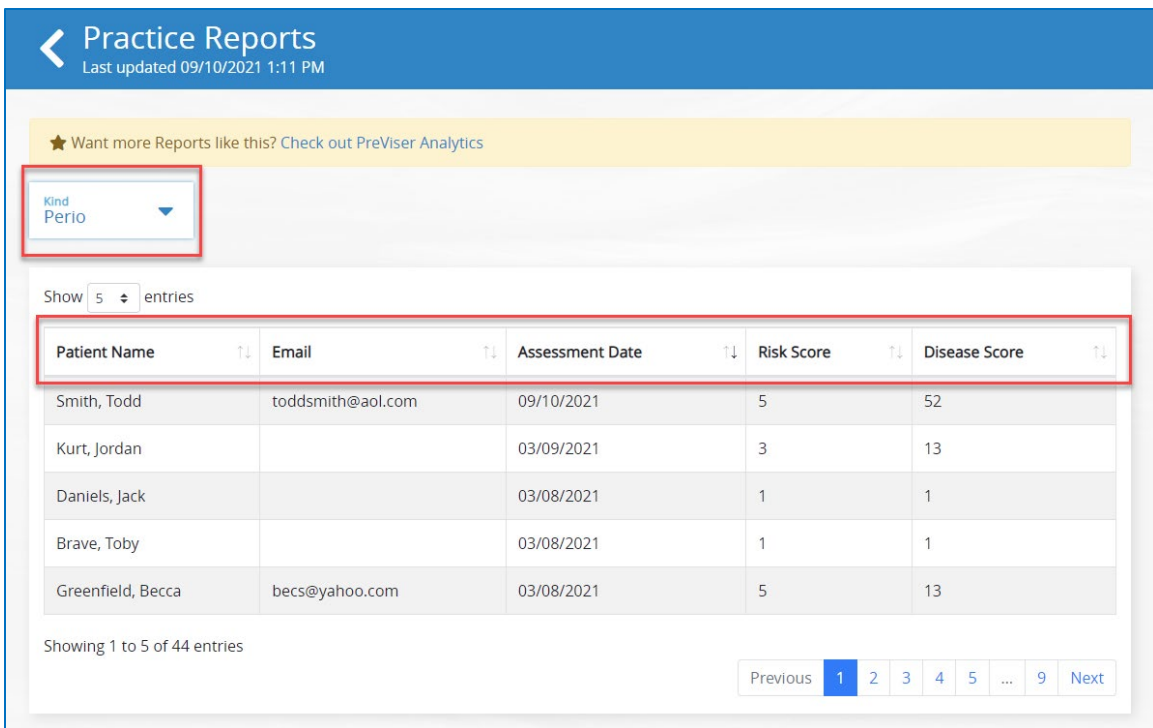

If no insurance for that patient is selected, it should state “no insurer selected.”

## PRACTICE REPORTS

You can use Practice Reports to identifying high risk patients and helping schedule recare appointments. Select the **More** dropdown arrow in the top header, then select **Practice Reports**.

These reports can be organized by assessment type, assessment date, risk scores, and patient names. Organize the reports by assessment date to see when patients may be due for a follow up risk assessment and then reach out to schedule an appointment.

### Gum Disease and You.

Knowing your gum health scores is the first step in improving, or maintaining the health of your gums. Here are other simple steps you can take:

- Talk to your dentist about managing any factors that contribute to elevated risk of disease.
- Ask your dentist how gum disease may impact other serious health ailments such as heart disease, Alzheimer's, strokes and diabetes.

#### Gum Disease Risk Score

1

out of 5

\* Lower score is better

1

2

3

4

5

Very Low Risk
Moderate Risk
Very High Risk

👍 The gum disease risk score describes the likelihood that without appropriate home and professional care, the health of your gums may worsen resulting in infection and inflammation of your gums and the possible loss of teeth.

#### Gum Disease Score

1

out of 100

\* Lower score is better

1

2-3

4-10

11-36

37-100

👍 Congratulations! Your score indicates your gums are healthy.

#### Gum Health Stability Score

0

out of 100

\* Higher score is better

⚠️ The gum health stability score informs whether or not your gum health is stable (unchanged [stable] or worsened condition). The first gum health assessment always results in a score of zero (0). As your gum health is assessed over time, the score will increase by 10 points for every year of gum health stability, reaching a maximum of a score of 100 indicating 10 years of stability; if your gum health worsens, the score will return to a score of zero (0).

#### To help maintain or improve the health of your gums:

##### Pockets less than 5mm

Pockets that are less than 5mm deep can have the most thorough removal of bacteria and calculus. However, all deep pockets were at one time less than 5mm with the optimal probing depth being 3mm or less.

Our office uses the latest in laser technology to ensure the best outcome for our patients. The use of lasers may influence which therapy is the most suitable for you.

### What Can I Do?

Your participation is very important.

The most common behaviors that influence health and treatment success are oral hygiene, nutrition, and smoking. You may receive advice, including resources for you to change to health-promoting behaviors.

Visit the Dentist more frequently.

Regular visits to the dentist to detect disease in the early stages can prevent more complex and expensive treatment. Better still are regular visits for preventative care targeted to your risk factors.

5

Very Low Risk      Moderate Risk      Very High Risk

**!** The tooth decay risk score describes the likelihood that without appropriate home and professional care, the health of your teeth may worsen, resulting in tooth decay or breakdown of existing restorations.

**Restorative Needs Score**

28

out of 100  
\* Lower score is better

1

2-9

10-29

30-49

50-100

Very Low Needs      Moderate Needs      Very High Needs

Your score indicates that you have some active tooth decay or some existing restorations that may be failing. Your dental professional can advise you on the best strategy to correct this situation.

### What Changed?

The information below shows your scores over time.

**Tooth Decay Risk Score**

**Restorative Needs Score**

**To help maintain or improve the health of your teeth:**

**Prevention - active intervention**

Prevention is based on risk and risk factors. This is treatment before disease is observed. Repair of the effects of disease rarely results in a condition as good as the original state. Preventing disease eliminates tooth loss and reparative treatment.

**Communication**

Dental treatment cannot keep you healthy. Your participation is very important. The most common patient behaviors that influence health and treatment success are oral hygiene, nutrition, and smoking. You may receive advice, including resources for you to change to health-promoting behaviors.

**Visit the dentist**

Symptoms are warning signs that frequently appear too late in the disease process for the simplest, most predictable, and least costly treatment. Regular visits to the dentist to detect disease in the early stages can prevent more complex and expensive treatment. Better still are regular visits for preventative care targeted to your risk factors.

**Oral hygiene**

Oral Hygiene is of particular importance to you. You should learn improved methods of maintaining your teeth and gums.

## What Can I Do?

Your participation is very important.

The most common behaviors that influence health and treatment success are oral hygiene, nutrition, and smoking. You may receive advice, including resources for you to change to health-promoting behaviors.

Visit the Dentist more frequently.

Regular visits to the dentist to detect disease in the early stages can prevent more complex and expensive treatment. Better still are regular visits for preventative care targeted to your risk factors.

## Oral Cancer and You.

Am I at risk?  
 Anyone can get oral cancer. The most common factors for oral cancer are:

- Over 40 years of age
- Use of any type of tobacco product
- Regularly drink alcohol
- Exposure to the HPV virus

How do I reduce my risk?  
 Lifestyle factors like tobacco, alcohol use and poor dental hygiene can be managed with a subsequent reduction in the risk of mouth cancer. In addition, recent research has indicated that exposure to the HPV 16 virus that can be sexually transmitted is a significant risk factor for oral cancer, and may be responsible for the increasing incidence of mouth cancers in younger populations.

**Oral Cancer Risk Score**

5

out of 5

\* Lower score is better

1

2

3

4

5

Very Low Risk

Moderate Risk

Very High Risk

**!** The oral cancer risk score describes the probability of developing mouth cancer as a result of your individual risk factors. These can include inherited factors as well as lifestyle factors.

**What Changed?**

The information below shows your scores over time.

**Oral Cancer Risk Score**

**Options you should consider:**

**Restrict or eliminate tobacco use**

Tobacco use of any kind (e.g. cigarettes, cigars, pipe or chewing tobacco) increases the risk of developing oral cancer. It is thought that chemicals in tobacco can damage the soft tissue of the mouth and this damage can lead to cancer. If you use tobacco and drink alcohol, the combinations of these activities can increase your risk of developing mouth cancer by up to 40 times when compared to those who neither smoke nor drink alcohol. If you wish to quit smoking and need help, your dental professional can advise you on effective strategies that may include drugs specifically designed to help people quit tobacco use, or counseling to help manage addiction.

**Reduce alcohol use**

The degree to which alcohol use can increase your risk of oral cancer is determined by how much and how frequent you drink. If you drink more than three alcoholic beverages a week, your risk will increase slightly. If you drink two or more alcoholic beverages daily, your risk is significantly increased.

**Cancer history**

Cancers that can metastasize to the mouth include breast, lung, renal, other bone, colon, and melanoma. However, metastases to the mouth are uncommon. Oral cancer increases the risk for developing subsequent additional malignancies. You should be sure that all of your health care providers are aware of previous malignancies and regular examinations to detect new cancer are very important.

What Can I Do?

**Your participation is very important.**

The most common behaviors that influence health and treatment success are oral hygiene, nutrition, and smoking. You may receive advice, including resources for you to change to health-promoting behaviors.

**Visit the Dentist more frequently.**

Regular visits to the dentist to detect disease in the early stages can prevent more complex and expensive treatment. Better still are regular visits for preventative care targeted to your risk factors.

**When to seek help**

If you notice a red or white patch, ulcer, lump, or pain in your mouth that lasts longer than three weeks, it's a good idea to point this out as soon as possible to your dental professional. Don't put this off. The longer you wait the more complex and expensive the treatment can become, and if the problem is cancer, the worse your outcome may be.

Your Clinical Access Code: PFHMDP4B84

The tooth decay risk score describes the likelihood that without appropriate home and professional care, the health of your teeth may worsen, resulting in tooth decay or breakdown of existing restorations.

#### Restorative Needs Score

**18** out of 100  
\*Lower score is better

1 2-9 10-29 30-49 50-100  
Very Low Needs Moderate Needs Very High Needs

Your score indicates that you have some active tooth decay or some existing restorations that may be failing. Your dental professional can advise you on the best strategy to correct this situation.

#### Gum Disease Risk Score

**1** out of 5  
\*Lower score is better

1 2 3 4 5  
Very Low Risk Moderate Risk Very High Risk

The gum disease risk score describes the likelihood that without appropriate home and professional care, the health of your gums may worsen, resulting in irritation and inflammation of your gums and the possible loss of teeth.

#### Gum Disease Score

**2** out of 100  
\*Lower score is better

1 2-3 4-10 11-36 37-100  
Very Low Risk Moderate Risk Very High Risk

Your score indicates your gums are affected but the infection has not spread to damage the bone.

#### Gum Health Stability Score

**1** out of 100  
\*Higher score is better

The gum health stability score informs whether or not your gum health is stable (unchanged) (stable) or increased (worsened) conditions. The first gum health assessment always results in a score of zero (0). As your gum health is assessed over time, the score will increase by 10 points for every year of gum health stability, reaching a maximum of a score of 100 (indicating 10 years of stability). If your gum health worsens, the score will return to a score of zero (0).

#### Oral Cancer Risk Score

**2** out of 5  
\*Lower score is better

1 2 3 4 5  
Very Low Risk Moderate Risk Very High Risk

The oral cancer risk score describes the probability of developing mouth cancer as a result of your individual risk factors. These can include inherited factors as well as lifestyle factors.

### What Changed?

The information below shows your scores over time.

#### Gum Disease Risk Score

#### Gum Disease Score

lower

### To help maintain or improve the health of your teeth:

#### Prevention - active intervention

Prevention is based on risk and risk factors. This is treatment before disease is observed. Repair of the effects of disease rarely results in a condition as good as the original state. Preventing disease eliminates tooth loss and reparative treatment.

#### Communication

Dental treatment cannot keep you healthy. Your participation is very important. The most common patient behaviors that influence health and treatment success are oral hygiene, nutrition, and smoking. You may receive advice, including resources for you to change to health-promoting behaviors.

#### Visit the dentist

Symptoms are warning signs that frequently appear too late in the disease process for the simplest, most predictable and least costly treatment. Regular visits to the dentist to detect disease in the early stages can prevent more complex and expensive treatment. Better still are regular visits for preventive care targeted to your risk factors.

#### Oral hygiene

Oral hygiene is of particular importance to you. You should learn improved methods of maintaining your teeth and gums.

### To help maintain or improve the health of your gums:

#### Pockets less than 5mm

Pockets that are less than 5mm deep can have the most thorough removal of bacteria and calculus. However, all deep pockets were at one time less than 5mm with the optimal probing depth being 3mm or less.

#### Oral hygiene

Oral hygiene is of particular importance to you. You should learn improved methods of maintaining your teeth and gums.

#### Options you should consider:

##### Restrict or eliminate tobacco use

Tobacco use of any kind (e.g., cigarettes, cigars, pipe or chewing tobacco) increases the risk of developing oral cancer. It is thought that chemicals in tobacco can damage the soft tissue of the mouth and this damage can lead to cancer. If you use tobacco and drink alcohol, the combinations of these activities can increase your risk of developing mouth cancer by up to 40 times when compared to those who neither smoke nor drink alcohol. If you wish to quit smoking and need help, your dental professional can advise you on effective strategies that may include drugs specifically designed to help people quit tobacco use, or counseling to help manage addiction.

##### Reduce alcohol use

The degree to which alcohol use can increase your risk of oral cancer is determined by how much and how frequent you drink. If you drink more than three alcoholic beverages a week, your risk will increase slightly. If you drink two or more alcoholic beverages daily, your risk is significantly increased.

Our office uses the latest in laser technology to ensure the best outcome for our patients. The use of lasers may influence which therapy is the most suitable for you.

### What Can I Do?

**Your participation is very important.**

The most common behaviors that influence health and treatment success are oral hygiene, nutrition, and smoking. You may receive advice, including resources for you to change to health-promoting behaviors.

**Visit the Dentist more frequently.**

Regular visits to the dentist to detect disease in the early stages can prevent more complex and expensive treatment. Better still are regular visits for preventive care targeted to your risk factors.

**When to seek help**

If you notice a red or white patch, ulcer, lump or pain in your mouth that lasts longer than three weeks, it is a good idea to point this out as soon as possible to your dental professional. Don't put this off. The longer you wait the more complex and expensive the treatment can become, and if the problem is cancer, the worse your outcome may be.

Your Clinical Access Code: FPFHMDAMMA

### Additional Resources

There are many public resources available if you have questions about oral cancer, quitting tobacco, or limiting your alcohol consumption. Here are just a few:
